

PRESS RELEASE

The Restyling of the Check-in area at Milan Bergamo Airport has been completed

The restyling of the check-in area at Milan Bergamo Airport has been completed, with the creation of a single area and the setting out of the desks on a continuous wall facing the airport terminal entrance.

This solution was conceived in order to guarantee better use of the area and more ordered and linear queueing.

The wall, constructed in wood and sheet steel with a pattern that reflects the bar code used to identify the airport, combines a pleasant aesthetic effect with increased functionality.

The new check-in desks have been made in red and white Corian, in harmony with the colours that mark the passenger routes.

There are 33 check-in desks, 4 of which are dedicated to self-service drop-off, allowing passengers with electronic boarding cards to check and leave luggage destined for the hold.

Flight information in Romanian

The full opening of the new check-in area has been presented along with another innovation: the addition of Romanian alongside Italian, English and Russian on the monitors providing real-time information on the status of flights in arrival and departure.

“This choice - explained Emilio Bellingardi, Director General of SACBO - is in response to the need to accommodate the multitude of destinations, above all in Eastern Europe, which make a significant contribution to the growth of Milan Bergamo Airport”.
