## **SACBO INVITES SECONDARY SCHOOLS TO THE “BIKE FUTURE CHALLENGE” PROJECT**

SACBO, the management company of Milan Bergamo Airport (BGY) — the first European airport certified as “Bike Friendly” — is promoting the “Bike Future Challenge” project for the 2025–2026 school year.

The initiative is aimed at upper secondary schools in Bergamo and its province, with the goal of raising students’ awareness about sustainable mobility, cycle tourism, and slow tourism, actively engaging them in a creative challenge for a more sustainable future.

Schools that join the initiative by November 28, 2025, will take part in an educational program designed to bring younger generations closer to a more responsible and environmentally friendly way of moving, while offering students the opportunity to develop ideas and proposals with a positive impact on the community and local area.

The Bike Future Challenge fully embraces the spirit of the UN 2030 Agenda, helping guide young people’s work toward the Sustainable Development Goals (SDGs).

Participating students will have the opportunity to:

- develop cross-disciplinary skills in civic, environmental, and cultural education;
- propose innovative solutions in the field of sustainable mobility;
- take part in real-life experiences related to the world of work and active citizenship;
- meet experts, startups, and associations working in sustainable mobility.

Schools can participate in the “Bike Future Challenge” by designing projects or creative works focused on sustainable mobility, joining a guided tour of the airport to explore facilities dedicated to cycle tourists,

and taking part in the final event, which includes workshops and presentations of the submitted projects. Each school can choose to take part in one or more of these activities based on its preferences.
